INNOVATION SERVICES

COMPLIANCE & CERTIFICATION

Ottersbrook, carry out **detailed checks** at the start of a compliance programme (**stage 1**) to ensure an efficient process, with full cost control in mind. We can offer full project management control or just partial support. Whether a simple compliance activity, full certification project, building control approval, or final modular warranty provision, Ottersbrook can manage all of your compliance and certification needs.

PRODUCT, SYSTEM, & VOLUMETRIC TESTING

Methodical preparation and adequacy of testing is often overlooked, because of a lack of pre-compliance audit, at the initiation stage of a project management process. Significant scrutiny is now in place across the construction industry, from the Building Safety Regulator (Building Safety Act, 2022) and the General Product Safety Regulation (GPSR, 2024). Ottersbrook are trusted by clients, regulators, and test bodies, to ensure a **risk managed test programme**, right first time, and within budget.

RESEARCH & DEVELOPMENT

Since the late 1980's, Ottersbrook have been fully engaged within the construction sector's dynamic 'R&D Ecosystem'. We are experts across a significant mix of materials, technologies, services, regulation, standards, and policies. We work with many universities, government depts, technical institutes, best practice collaborations, round tables, standards committees, building regulatory forums, and also trade and professional bodies, whenever **continual improvement**, or expertise, is required.

DFMA ALIGNMENT

Ottersbrook have developed several successful process flows, due to our coal face manufacturing and delivery experience as manufacturers ourselves. We can simply **map out your process**, or we can create a full DfMA platform using a RIBA DfMA overlay, for vertical integration and optimisation of your operations. We work with manufacturers, contractors and end clients constantly in this area, as we integrate other tools such as ITP process management, and lean protocols.

AN EXPERT PARTNER FOR YOUR TECHNICAL INNOVATION NEEDS

- Expert in building physics and test laboratory relationship management
- Industry board members and research professorship at prominent universities
- Accepted partner and collaborator at BOPAS, NHBC, BBA and other compliance bodies
- Technical writing contributors to BOPAS & NHBC Standards and policy (MMC)
- Advisors to MHCLG on MMC PAS 8700 set up, engagement, and technical author placement
- Technical authors (industry & academic) on MMC development and deployment
- Project Director on the UK's largest client led MMC collaboration (www.oshahomes.org)
- Over 35 years of organic and disruptive innovation management (manufacturing & site leadership)

BUSINESS SERVICES

BUSINESS STRATEGY

Ottersbrook have helped many organisations to create their development and deployment strategies. The initial process is carried out via a well established methodology, to capture all relevant opportunities and risks. This is then presented in a **single page deployment plan**, for the management and operational teams. Each activity, sub activity and task, are then captured to produce accurate digital dashboards, which are then analysed for robust decision making, and progress tracking.

PROJECT MANAGEMENT

Ottersbrook have many project management commissions under our belt. Such programmes historically, have run from 4-6 weeks to over 5 years, on more complex programmes of work. For instance, on the well-established and documented OSHA Homes programme, (www.oshahomes.org), where we act as the Project Director, for 23 social housing partners, who deliver circa 9,000 homes per annum, using a range of MMC solutions. At Ottersbrook, Project Management is **our core DNA activity**.

DEVELOPMENT WORKSHOPS

Ottersbrook have a very engaging and dynamic approach to managing development workshops, built up over 35 years of continual improvement and client feedback. Our workshop approach has delivered **considerable insight and operational success** to many organisations at varying levels of market presence. We create an enjoyable atmosphere for all teams at all levels, challenging the status quo, or simply looking for different ways to deliver a project, or full corporate strategy, more effectively.

EXPERT WITNESS SUPPORT

Our witness support, can be anything from intense building pathology, product, system, and volumetric analysis, site and factory investigations, to *independent litigation reports**. This expert approach can also be beneficial, when engagement with regulatory or certification bodies, has not gone according to plan, or a solution has not been installed, in accordance with the relevant specification. Whatever the reason, we provide **an RICS registered service**, to support your assessment needs.

* An independent law firm commission, will be required for **independent reports**, that require the removal of bias and conflict of interest, between Ottersbrook and the relevant parties involved.

A STRATEGIC PARTNER FOR YOUR BUSINESS VISION, PERFORMANCE, & GROWTH

- Control at your finger tips, with experienced strategic and tactical consultants from your industry
- Workshop programmes that will drive your business forward with total transparency
- Digital platform control for leadership and operational management teams
- Agile processes across a wide range of activities and specialisms
- Full project management (or partial support), working with your teams, or on behalf of your teams
- An expert partner that can also act as an RICS registered expert witness to support your business
- A significant reach (and trust) in industry, to support your business strategically, and commercially
- World-class problem solving tools, to provide your business, with significant value propositions
